

Exhibit J

Khanna × Gottheimer Coordination Audit

Subjects. Rep. Ro Khanna (CA-17) and Rep. Josh Gottheimer (NJ-5).

Question. Do donor, trading, and vote data establish Member-pair coordination that would extend the dark-money-ecosystem and donor-vote theories from a single-Member framing to a coordinated Member pair?

Short answer. Partially. Ten crypto-industry decision-maker donors max out to both Members at or near the \$6,600 FECA two-year cycle cap; the two Members align on four of five signature 118th-Congress crypto-industry bills; but the bulk-donor-base overlap is below peer baseline, Gottheimer holds no crypto-exchange or mining equities, and same-day trade coordination concentrates in mainstream Big Tech and mainstream pharma rather than in industry-sensitive names. The coordination signal lives in the donor and vote axes, not the trading axis.

1. Trade-overlap audit

PTR universe:

- Khanna household: 36,297 PTR transaction rows across 114 filings and 2,694 distinct canonicalized issuers.
- Gottheimer: 3,405 rows across 107 filings and 570 distinct issuers.
- Intersection: 280 issuers traded by both.

Top pairwise issuer overlap:

Issuer	Ticker	Khanna	Gottheimer
Microsoft	MSFT	173	163
Alphabet	GOOGL	257	62
Apple	AAPL	147	76
Nvidia	NVDA	130	43
Meta Platforms	META	88	25
Tesla	TSLA	80	61
Eli Lilly	LLY	89	44
Salesforce	CRM	116	26
AbbVie	ABBV	98	19
Johnson & Johnson	JNJ	116	15

Sector-sensitive slice:

Sector	Issuer	Khanna	Gottheimer
Defense primes	Lockheed Martin (LMT)	30	0
	Raytheon (RTX)	23	0
	Palantir (PLTR)	25	0
	Boeing (BA)	36	7
	Honeywell (HON)	58	4
	General Electric (GE)	66	4

Sector	Issuer	Khanna	Gottheimer
Crypto	Coinbase (COIN)	11	0
	Robinhood (HOOD)	11	0
	MicroStrategy (MSTR)	—	0
	PayPal (PYPL)	114	28
	Block (SQ)	30	12
Pharma	Pfizer (PFE)	185	1
	Merck (MRK)	161	4
	Moderna (MRNA)	52	7

Gottheimer holds zero shares of the crypto-exchange and crypto-mining tickers where his shared crypto-donor exposure would predict activity, and zero shares of the core House Armed Services Committee-sensitive defense primes (LMT, RTX, PLTR) that dominate respondent’s committee jurisdiction. Where the two Members overlap, they overlap on broad-market Big Tech and mainstream pharma — the profile of any actively-managed professional portfolio.

After de-fan-out, ± 7 -day windowing, and mega-cap suppression, the Member pair shares 278 unique same-direction coordination pairs across 99 canonical companies. The pattern is dominated by MSFT, GOOGL, AAPL, and NVDA market-beta rather than by industry-sensitive timing.

Representative tight (± 7 -day, same-direction) cells:

Issuer	Khanna date	Type	Owner	Gottheimer date	Type	Δ days
Alphabet	2019-09-16	P	SP	2019-09-11	P	–5
Air Products	2020-02-11	P	SP	2020-02-04	P	–7
AMD	2021-08-02	P	SP	2021-08-04	P	+2
AbbVie	2022-02-17	P	SP	2022-02-18	P	+1
Adobe	2024-04-25	S	SP	2024-04-29	S	+4
					(partial)	
3M	2025-01-22	P	SP	2025-01-21	P	–1
Abbott Labs	2025-01-22	P	SP	2025-01-28	P	+6
AbbVie	2025-03-27	P	SP	2025-04-03	P	+7

Gottheimer’s sell-side rows carry the House Clerk “(partial)” disposition tag throughout; his owner distribution is almost entirely self (rather than spouse or dependent child), which is the profile of a self-directed portfolio rather than a household-office-adjacent structure.

2. Donor-base overlap

Canonicalized (donor name + five-digit ZIP) intersection of unique donors to each Member’s principal committee:

Pair	Overlap donor-keys
Khanna ↔ Schiff	757
Khanna ↔ Jayapal	321
Khanna ↔ Bowman	299
Khanna ↔ Spanberger	299
Khanna ↔ Gottheimer	240

Khanna’s median overlap with another heavy-fundraising House Democrat is roughly 310 donors. The 240-donor Khanna ↔ Gottheimer overlap is the lowest of the five comparisons and does not, on its own, distinguish the pair from any other Bay-Area-and-Mid-Atlantic-Democratic pairing.

The qualitative pattern is different once the filter narrows to crypto-industry employers. Filtering donors to employers matching Coinbase, Ripple, Andreessen Horowitz (a16z), Multicoin, Paradigm, Blockchain Association, Kraken, Gemini, Circle, Dragonfly, FTX, DCG, Chainlink, Polygon, Jump Crypto, MicroStrategy, Anchorage, Chainalysis, or Castle Island:

- Khanna principal committee (Ro for Congress, FEC ID C00503185): 111 contributions from 53 distinct crypto-industry donors, totaling \$297,700.
- Gottheimer principal committee (FEC ID C00573949): 45 contributions from 26 distinct crypto-industry donors, totaling \$101,800.
- Name-exact intersection: **10 distinct donors.**

Donor	Employer	To Khanna	To Gottheimer
Ben Horowitz	Andreessen Horowitz (a16z)	\$12,400	\$6,600
Kristin Smith	Blockchain Association	\$15,700	\$2,900
Amed Khan	Paradigm Global	\$11,800	\$5,400
Tim Collins	Ripplewood	\$12,400	\$2,000
Felicia Horowitz	Horowitz Family Foundation	\$6,600	\$5,100
Brian Armstrong	Coinbase (CEO)	\$3,300	\$6,600
Emilie Choi	Coinbase (COO / President)	\$3,300	\$6,600
Fred Ehrsam	Paradigm (co-founder)	\$3,300	\$6,600
Sam Bankman-Fried	FTX	\$2,900	\$5,800
Mark Wetjen	FTX US	\$1,000	\$5,800
Total (10 donors)		\$72,700	\$47,400

Each Gottheimer receipt from Armstrong, Choi, Ehrsam, Bankman-Fried, and Wetjen is at or near the \$6,600 FECA individual-to-candidate two-year-cycle cap. The overlap is small in count but qualitatively distinctive: the industry’s decision-maker tier is max-giving to both Members simultaneously.

3. Shared-vendor disclosure test — Global Strategy Group

Under 11 C.F.R. § 109.21(d)(4), a pollster or strategic-research vendor who serves a candidate within 120 days of providing the same service to an Independent Expenditure committee spending on that candidate’s behalf creates a rebuttable presumption of coordination. Global Strategy Group LLC (New York) is the common vendor on one side of the Member pair:

Committee	Payments to Global Strategy Group	Transactions	Dates
PROTECT PROGRESS (FEC ID C00848440)	\$132,500	3	2023-11-01; 2024-07-18; 2024-09-18
Gottheimer principal committee (FEC ID C00573949)	\$237,500	9	2019-10-03 through 2024-11-13

The 2024-07-18 and 2024-09-18 PROTECT PROGRESS polling payments sit within the 120-day coordination window of Gottheimer’s 2024-08-07 and 2024-10-17 polling payments to the same firm. PROTECT PROGRESS separately spent an Independent-Expenditure amount benefiting Gottheimer’s 2024 general-election campaign.

Respondent’s side of the pair has no substantive common-vendor overlap with PROTECT PROGRESS. The only shared vendor on respondent’s ledger is Amalgamated Bank (\$12,378 in fees), which is the Democratic-institutional depository common to most Democratic committees — a fee-level relationship, not a strategic-research relationship. Treasurers are distinct (Khanna: David Donaldson; Gottheimer: Batya Klein; PROTECT PROGRESS: Brandon Philipezyk).

The § 109.21(d)(4) common-vendor coordination question accordingly attaches to Gottheimer through PROTECT PROGRESS via Global Strategy Group, not to respondent.

4. Vote-alignment audit

Signature 118th-Congress crypto-industry votes:

Roll call	Date	Bill	Khanna	Gottheimer	Aligned?
226	2024-05-22	H.R. 4763 FIT21 Act — final passage	AYE	AYE	YES
189	2024-05-08	H.J. Res. 109 SAB 121 resolution — passage	NAY	YEA	split
355	2024-07-11	H.J. Res. 109 SAB 121 — override vote	YEA	YEA	YES
223	2024-05-22	H.R. 4763 amendment	AYE	AYE	YES
224	2024-05-22	H.R. 4763 amendment	AYE	AYE	YES
225	2024-05-22	H.R. 4763 amendment	NO	AYE	split

Four of five canonical crypto-industry votes align pro-industry — placing both Members in the top quartile of the House Democratic caucus (FIT21 final passage drew only 71 Democratic AYE votes). The two Members split on the SAB 121 initial resolution-passage vote; they converged on the veto-override.

5. Disposition

- The donor-overlap signal is concentrated and max-out — the industry’s decision-maker tier simultaneously at the \$6,600 per-cycle cap to both Members — rather than broad.
- The crypto-bill-vote signal places both Members in the caucus top quartile, with one split on an early procedural vote and convergence on the override.
- The common-vendor test under 11 C.F.R. § 109.21(d)(4) attaches to Gottheimer through PROTECT PROGRESS via Global Strategy Group, not to respondent.
- The Member-pair trade-coordination signal is weak — shared trading concentrates in market-beta Big Tech and mainstream pharma, and Gottheimer holds none of the crypto-exchange, crypto-mining, or defense-prime tickers where industry-sensitive timing would be visible.

The pair is coordinated at the donor and vote level in a limited, industry-specific way, not at the trading level. The stronger independent case attaches to Gottheimer on the donor-and-vendor axis; respondent’s side of the pair is addressed in this filing package on the donor, vote, and Independent-Expenditure axes as a single-Member matter.

Primary-source substrates: FEC Schedule A and Schedule B individual-contribution and committee-disbursement data for FEC committees C00503185, C00573949, and C00848440; House Clerk Periodic Transaction Reports for both Members; House Clerk roll-call records for 118th Congress H.R. 4763 and H.J. Res. 109.
