

Exhibit DD

The California-state mirror: Q1-2026 crypto-industry state-level mobilization, parallel to the federal PROTECT PROGRESS pipeline

Primary sources. California Secretary of State Cal-Access bulk export (<https://campaignfinance.cdn.sos.ca.gov/dbwebexport.2>). Cal-Access tables for recipient-committee organization (lake.ca_cal_access_cvr_so_cd), filer name (lake.ca_cal_access_filename_cd), contribution receipts (lake.ca_cal_access_rcpt_cd), filer-to-filings linkage (lake.ca_cal_access_filer_filings_cd), and Form 497 late-contribution disclosures (lake.ca_cal_access_s497_cd); San Francisco Ethics Commission Campaign Finance Transactions disclosure (DataSF dataset PITQ-E56W, lake.ca_sfgov_org_campaign_finance_transactions_pitq_e56w).

1. Summary

Across the first quarter of 2026, the same cryptocurrency-industry principals who finance the federal Super-PAC pipeline documented in Exhibits G, P, W, and BB concurrently deployed **at least \$18.75 million across four California state-level political committees**, operating through **two structurally independent compliance stacks**. The state-layer deployment mirrors the federal pattern — same donor households, same temporal window, same policy posture-seeking behavior — but routes through California’s own disclosure regime rather than the FEC’s. A separate San Francisco city-grain disclosure vertical captures a third stream of Mr. Larsen’s political spending: \$10.9 million in disclosed contributions at the SF-city level across 2019–2026, bringing his combined disclosed state-and-city-grain mobilization to approximately \$25.65 million.

The state-and-city mirror supplies structural-continuity context for the federal coordination question that Count 4 of the accompanying Office of Congressional Conduct complaint and the companion Federal Election Commission referral place at issue: the donor cohort financing the federal PROTECT PROGRESS slate (Exhibit P) is the same donor cohort that activated a parallel state-level network on an essentially identical timeline.

2. The four Q1-2026 California state-level committees

The Cal-Access Form 497 late-contribution records for the period January 28, 2026 through February 17, 2026 disclose four recipient committees that together received at least \$18,750,000 from cryptocurrency-industry principals:

California recipient committee	Cal-Access filer ID	Status	Q1-2026 inflow	Donor
Building A Better California	1486767	Recipient committee qualified 2026-01-12	\$4,000,000 (2026-01-28)	Chris Larsen (Ripple Labs Executive Chairman)
Golden State Promise	1486695	Recipient committee	\$10,000,000 (\$5M 2026-02-05 Larsen individual + \$5M 2026-02-11 Ripple Labs corporate)	Chris Larsen + Ripple Labs, Inc.
California Business Roundtable Issues PAC	1264590	Long-running ballot-measure committee	\$750,000 (2026-01-29 / 2026-02-11)	Chris Larsen
Mahan for Governor 2026; California Back to Basics Supporting Matt	1487425	Gubernatorial IE committee	\$4,000,000 (2026-02-09 / 2026-02-17 and related F496P3 late-contribution filings)	Coinbase employees including CEO Brian Armstrong (named F496P3 line items at \$500,000 and \$250,000)
Q1-2026 combined			≥ \$18,750,000	

The four inflows land inside a fourteen-day window — from Building A Better California’s January 28 receipt through Golden State Promise’s February 11 receipt — with the two Mahan-for-Governor filings immediately following. The temporal concentration is the mirror of the federal FAIRSHAKE-to-PROTECT-PROGRESS pipeline’s own cycle-wide concentration (Exhibit BB §4) but compressed to a single quarter.

3. Two parallel compliance stacks

A distinctive feature of the state-layer network is that the four committees do **not** share a single treasurer or administrative office. Instead, they route through two structurally independent compliance infrastructures operating in parallel.

Stack A — Nielsen Merksamer / Bank of Marin / San Rafael 94901.

- Building A Better California (filer 1486767) — Treasurer Elli Abdoli; filing contact FORM410@NMGVLAW.COM (Nielsen Merksamer Parrinello Gross & Leoni, a major California political-compliance firm); bank Bank of Marin; registered address San Rafael, California 94901.
- California Business Roundtable Issues PAC (filer 1264590) — Treasurer Steven S. Lucas; same Nielsen Merksamer / Bank of Marin / San Rafael 94901 stack. This PAC is a long-running ballot-measure committee whose donor roster historically reflects traditional California business interests; its Q1-2026 \$750,000 infusion from Mr. Larsen is a material change in the character of its funder base.

Stack B — Bison Strategies / Amalgamated Bank / Sacramento 95814.

- Golden State Promise (filer 1486695) — Treasurer Brandon Philipczyk, the same individual who serves as treasurer of PROTECT PROGRESS and FAIRSHAKE at the federal level (see Exhibit BB §§2–3); filing contact Bison Strategies; bank Amalgamated Bank (Washington, D.C.); registered address Sacramento, California 95814. This is the first California-state committee for which Mr. Philipczyk has been disclosed as treasurer, and it extends his multi-committee compliance practice from the federal layer into the California-state layer.

The two-stack pattern is structurally unusual. A single donor household (Mr. Larsen / Ripple Labs) distributes \$14.75 million across three committees in the same two-week window, deliberately routing two of those com-

mittees through one compliance firm and the third through an entirely different compliance firm, bank, and treasurer. The practical effect is that the state-layer network is not a single committee that the California Fair Political Practices Commission or the California Attorney General can evaluate as one operation, but rather two parallel operations whose common origin lies only at the donor tier.

4. The donor cohort is the same crypto-industry cohort

The donor cohort driving the Q1-2026 California-state mobilization is the same cohort that finances PROTECT PROGRESS at the federal level:

- **Chris Larsen / Ripple Labs**, Executive Chairman. Individual contributions to Building A Better California (\$4 million), Golden State Promise (\$5 million individual + \$5 million Ripple Labs corporate), and California Business Roundtable Issues PAC (\$750,000). Ripple Labs at the federal level contributed \$1,500,000 to PROTECT PROGRESS (Exhibit G §2; Exhibit P §1).
- **Coinbase / Brian Armstrong**, Coinbase CEO. Coinbase-employer individual donors aggregate approximately \$4 million to the Mahan-for-Governor committee (filer 1487425) across Q1 2026, including Mr. Armstrong's own disclosed F496P3 line items at \$500,000 (2026-02-09) and \$250,000 (2026-02-17). Coinbase at the federal level contributed \$2,500,000 to PROTECT PROGRESS (Exhibit G §2).

4.1 The state-level participating cohort: Larsen, Armstrong, and Haun Ventures

A 16-cluster cryptocurrency-industry probe of California Form 497 late-contribution records identifies the state-level participating cohort. The probe scope was defined under three conjunctive selection criteria, applied at the cluster-identification stage prior to any Cal-Access query: (i) every employer that contributed \$250,000 or more to PROTECT PROGRESS or FAIRSHAKE in 2024 (per Exhibit G §2 and Exhibit BB §3); (ii) the largest publicly identified cryptocurrency exchanges and trading platforms by 2024 disclosed assets under management; and (iii) the largest publicly identified crypto-focused venture-capital and infrastructure firms by deployed capital. The sixteen clusters that satisfied at least one of the three criteria are: Andreessen Horowitz (a16z), Blockchain, Chainalysis, Circle, Coinbase, Filecoin, Gemini, Haun Ventures, Jump Crypto, Kraken, Pantera Capital, Paradigm, Polygon, Ripple, Solana Labs, and Uniswap.

The probe filter against lake.ca_cal_access_s497_cd Form 497 late-contribution records was entity_cd = 'IND' (individual donors) with amount >= 1000, evaluated across the 2024–2026 window. The state-level participating cohort comprises three clusters: **Ripple** (approximately \$21.2 million raw / \$15.8 million deduplicated, dominated by Mr. Larsen), **Coinbase** (\$40,000 across four events), and **Haun Ventures** (\$8,000 across two events). The state-level participating cohort is therefore narrower than the federal PROTECT PROGRESS funder list, with Mr. Larsen and Mr. Armstrong driving the state layer and the remainder of the crypto-industry donor universe routing through federal rather than state channels.

5. Larsen's San Francisco city layer — an additional \$10.9 million

Beyond the California-state layer, a third disclosure vertical at the San Francisco city grain captures an additional stream of Mr. Larsen's political spending. The San Francisco Ethics Commission's Campaign Finance Transactions dataset discloses **\$10,915,392 across 146 contribution records** with employer reported as "Ripple" or "Ripple Labs" across August 2019 through April 2026, 21 distinct donor name-variants, with Mr. Larsen personally accounting for approximately \$9.84 million of the total. The top city-grain recipients include:

San Francisco recipient	Total
Forward Action SF Supporting London Breed for Mayor 2024 (Abundance Network)	\$1,350,000
Neighbors For A Better San Francisco	\$1,200,000
Protect SF Small Biz and Economic Recovery	\$700,000
No on B Stop the Cop Tax	\$500,000
Yes on F Treatment Compassion Accountability	\$450,000
Yes on A Safer Streets	\$450,000
Families for a Vibrant SF / Effective Government	\$400,000
SF Democratic County Central Committee	\$235,000
Stop the Recall / Stand with Joel Engardio	\$200,000

The SF-city vertical, like the state vertical, is structurally dominated by Mr. Larsen. Coinbase-employer disclosed spending at the SF-city grain by contrast is modest (\$27,050 across 26 records, 20 donors), and Andreessen Horowitz’s SF-city footprint is similarly small (\$4,500, 14 records, 11 donors). The cross-vertical asymmetry reproduces at city grain the same pattern the state grain exhibits: a small number of crypto-industry principals — Mr. Larsen preeminently — account for the disclosed non-federal political spending, while the rest of the industry routes through federal channels.

6. The California mirror as structural-continuity context for the federal coordination question

The California state-and-city mirror supplies three forms of structural-continuity record evidence for the federal coordination question set out in Count 4 of the accompanying Office of Congressional Conduct complaint and in the companion Federal Election Commission referral:

1. **Continuity of donor identity.** The Q1-2026 state-layer \$18.75 million and the 2024-cycle federal \$6.78 million PROTECT PROGRESS receipts (Exhibit G §2) are drawn from an overlapping donor cohort. Mr. Larsen / Ripple Labs and Mr. Armstrong / Coinbase are the two largest participants in both layers.
2. **Continuity of administrative infrastructure.** The Bison Strategies / Amalgamated Bank / Sacramento stack servicing Golden State Promise is operated by the same individual, Mr. Philipczyk, who serves as treasurer for FAIRSHAKE and PROTECT PROGRESS at the federal level (Exhibit BB §2). The compliance infrastructure is continuous across the jurisdictional boundary.
3. **Continuity of policy-posture-seeking behavior.** The California state-level committees include a gubernatorial independent-expenditure committee (Mahan for Governor 2026) supporting a candidate who, if elected, would seat a state-level executive whose appointees would administer California’s crypto licensing regime in parallel with the federal regime that Representative Khanna’s vote on the Financial Innovation and Technology for the 21st Century Act (FIT21) addressed. The same donor cohort is thus disclosed as a participant at both the state-level and federal-level regulatory layers within the same temporal window.

6.1 Anticipated-Response framing and venue-format cross-reference

The Anticipated-Response framework that governs the federal coordination question — the line of authority comprising *McConnell v. FEC*, 540 U.S. 93 (2003); *Citizens United v. FEC*, 558 U.S. 310 (2010); and *FEC v. Ted Cruz for Senate*, 596 U.S. 289 (2022) — is developed in the body of the Office of Congressional Conduct complaint. This Exhibit’s role is to supply record-grain support for the Anticipated-Response paragraphs of that

complaint, consistent with the venue-format conventions captured in `public.v_complaint_format_checklist` where `venue = 'occ'`.

6.2 Cumulation and multiplicity relative to Exhibits BB, P, and W

This Exhibit overlaps in record subject-matter with Exhibits BB, P, and W. The donor identities of the Ripple and Coinbase principals, the federal recipient identities of PROTECT PROGRESS and FAIRSHAKE, and the underlying federal Super-PAC receipt aggregates are first established in those Exhibits and are referenced here only by cross-citation. The same conduct is not double-counted across Exhibits. The Office of Congressional Conduct, the Federal Election Commission, the Department of Justice Public Integrity Section, the House Committee on Ethics, and any other reviewing venue should treat the federal Super-PAC receipts as a single record set fully developed in Exhibits BB, P, W, and G.

The contribution this Exhibit makes is the structural-continuity record at the California-state and San Francisco-city grain: the four Q1-2026 state committees in §2, the two parallel compliance stacks in §3, the state-level participating cohort identified in §4.1, and the SF-city vertical in §5. Damages bases, contributions aggregates, independent-expenditure aggregates, and per-donor solicitation counts at the federal grain are drawn exclusively from Exhibits BB, P, W, and G; those federal-grain figures are not aggregated with the state-and-city figures reported here.

Methodology footnote. California state-layer committee identification and Q1-2026 receipt totals are drawn from `lake.ca_cal_access_s497_cd` (Form 497 late-contribution filings) deduplicated by (`filing_id`, `amend_id`, `tran_id`) and joined to `lake.ca_cal_access_filer_filings_cd` and `lake.ca_cal_access_filename_cd` for recipient-committee identification, filtered to `ctrib_emp` matching cryptocurrency-industry employer strings (“Ripple,” “Coinbase,” and related spellings) for calendar years 2024 through 2026. The 16-cluster probe finding is drawn from the same dataset with `entity_cd='IND'` and `amount >= 1000`. San Francisco city-grain totals are drawn from the DataSF dataset PITQ-E56W, `lake.ca_sfgov_org_campaign_finance_transactions_pitq_e56w`, filtered to `transaction_employer ILIKE '%ripple%'` with aggregation by `filer_name`. The two-compliance-stack finding is established by joining `lake.ca_cal_access_cvr_so_cd` (Statement of Organization) on `filer_id` for each committee and reading the disclosed treasurer, filing-contact, bank, and registered-address fields directly.
